Background of the Study

The use of digital technology has become an important part of many services today, including payment systems. Many institutions are now using online platforms to make transactions faster and more convenient for users.

In schools, tuition payment is usually done through manual transactions at the cashier. During payment periods, students often experience long lines which can take a lot of time and effort before they can complete their payment.

Some schools allow online payments through applications like GCash. However, this method may still be risky since students might accidentally send money to the wrong account.

To address this issue, the researchers propose the development of an Online Tuition Payment System that will allow students to top up their balance and pay their tuition directly through the system. This can help make the payment process more convenient, secure, and efficient for students.

Statement of the Problem

This study aims to develop an Online Tuition Payment System for students.

Specifically, this study seeks to answer the following questions:

1. How can an online tuition payment system help make the payment process easier for students?
2. How can the system help reduce long lines during tuition payment in school?
3. How can the system help make tuition payment more convenient for students?

Objectives of the Study

General Objective:

To develop an Online Tuition Payment System that will make tuition payment easier, faster, and more convenient for students.

Specific Objectives:

1. To make the tuition payment process easier for students.
2. To help reduce long lines during tuition payment.
3. To make tuition payment more convenient for students.

Scope and Limitations

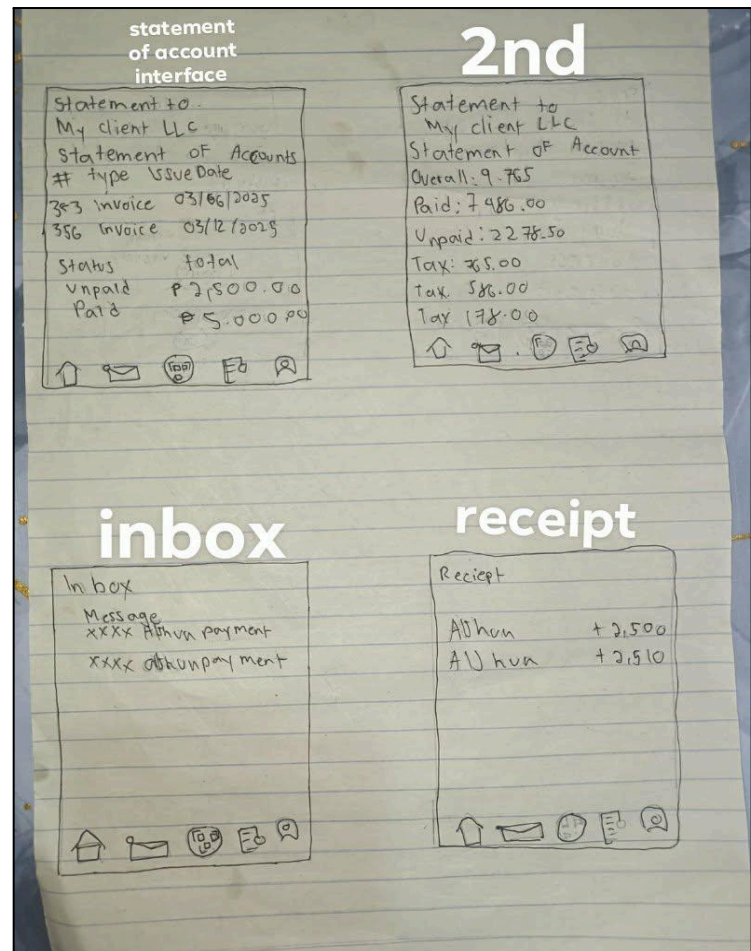

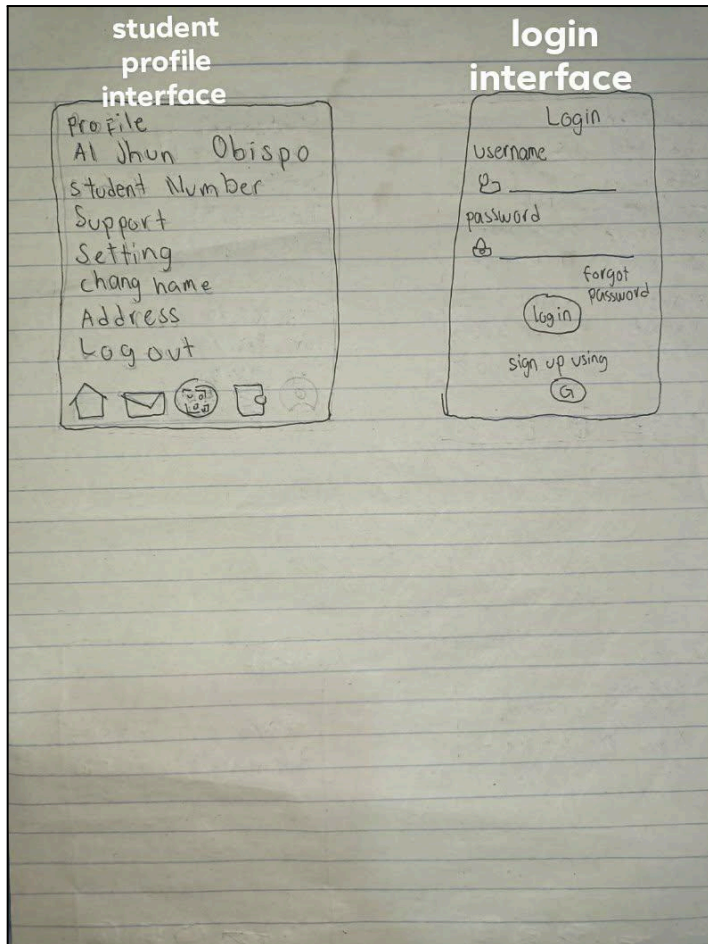

Scope:

This study focuses on the development of an Online Tuition Payment System for students. The system allows students to log in, top up their balance, and pay their tuition directly. The focus is on improving ease of payment, reducing long lines, and making the process more convenient.

Limitations:

The system only includes basic tuition payment features. It does not connect to real banks or external payment apps. It is only for tuition payments and does not include other school fees.

PROTOTYPE

pay tuition interface

Pay tuition
Summary 25,790.00
total payments 25,490.01
total overpayments 0.00
total refunds 0.00
total pending payments 0.00
total balance 0.00
